"People have become so passionate about saving on energy and about changing their lifestyle by reducing their carbon footprint," says Alexa Knight, managing member of Solar Power Evolution. "Getting an energy bill that reads '\$0.00,' or a check back from PNM is so exciting for our clients." With the world evolving into a more self-sufficient way of life, Solar Power Evolution and Lee Michael Homes enjoy helping their clients save energy while improving the environment with each home they build, and with every energy package installation.

"Our vision is to design and build high performance, environmentally friendly homes that suit today's lifestyles, and by integrating the newest technology for photovoltaic and solar energy into homes and businesses at an affordable price," says Mike Knight, president of Lee Michael Homes. "It's crazy not to take advantage of the natural resources we have in New Mexico, with over 300 days of sunlight annually." Mike and Alexa work with the evolving needs of their customers through the latest technologies, more affordable costs, and sensible designs. By integrating their talents and experience in designing and building custom homes, offering effective energy solutions is key in enhancing their customer's standard of living. "It is genuinely rewarding to make such a difference in the daily lifestyle of our clients," they say.

With their team highly trained in design, installation, and customer service, Alexa and Mike have won many awards for their designs and innovative homes in and around the Albuquerque area over the last 20 years. With a strong background in construction, they enjoy offering energy-saving solutions for new and existing homes and businesses. Alexa says, "Whether the goal is to build a 'green' high-performance custom home, or make an existing home more energy efficient, Lee Michael Homes and Solar Power Evolution always find the perfect solution to any situation."
